"MasterStudio has dramatically reduced our development effort and time. Productivity was significantly enhanced, resulting in a considerable value increase for our customers."
*-- Paul Klaassen, VDA Business Solutions, The Netherlands*

MasterStudio

### MasterStudio Framework for Omnis

Amazingly Powerful!

MasterStudio is a powerful object-oriented application framework for Omnis Studio. Inspired by the impressive frameworks available to the Java community, MasterStudio implements high-end design patterns to give Omnis Studio developers unprecedented capabilities for quickly building advanced and maintainable GUI-based applications.

Over four years in the making, MasterStudio was written entirely in Omnis Studio by a team of experts with years of experience in object-oriented design.

The second edition of the MasterStudio Developer's Guide counts 293 pages. The book now includes a full index, improved binding, updated class reference, and UML class diagrams.

PlanBoard for Omnis Studio

Graphical Scheduling. 100% Omnis Code.

PlanBoard for Omnis is a GUI framework that allows you to easily add advanced interactive scheduling to your Omnis Studio applications. Developers worldwide are using PlanBoard for scheduling tasks, people, machines, order status, rooms, TV programming, advertising, satellite broadcasts, appointments, projects, car rentals, etc.

PlanBoard for Omnis Studio was built on top of the MasterStudio foundation framework. Subclassing a single so-called "PlanBoard delegate object" is all that is required to create a fully-functional PlanBoard window instance. You can also subclass any part of a PlanBoard window to give it your own look & feel. One or more PlanBoard panes can be added to an existing window class. You can use any database supported by Omnis. PlanBoard uses your own lists, regardless of the column names you use. Most PlanBoard classes come unlocked, so you can easily enhance or subclass them!

Stuck in Omnis Classic?

Now that Omnis Classic is an end-of-life product that does not run on Intel Macs and lacks of support for XP and Vista features, what to do with your mission-critial Omnis Classic application? Many Omnis developers are considering:

- using the conversion tool included with Omnis to ease the move to Omnis Studio, followed by an unknown amount of time required to "tweak" the existing application,
- training the development team for full object-oriented development in Omnis Studio followed by a redesign and rewrite,
- rebuilding the application by using an application framework like MasterStudio.

Rather than forcing yourself to make such a critical and costly investment hastily, why not create additional time for yourself and your clients!

Our business partner VDA has worked with clients in Europe and the U.S. to convert their complex Omnis applications through VDA's **Classic2Studio Conversion Service**. Where tradional conversion tools achieve about 80% automatic conversion, VDA's "full service" solution achieves up to 99% automatic conversion! By using VDA's service, you:

- keep your investment in your Classic Omnis application;
- enable your application to run on OSX, Intel Macs, and Vista;
- create additional time for your developers to increase their productivity tredendously by moving to an advanced Object-Oriented framework like MasterStudio.
